# Agenda

Intro to Mapping

03

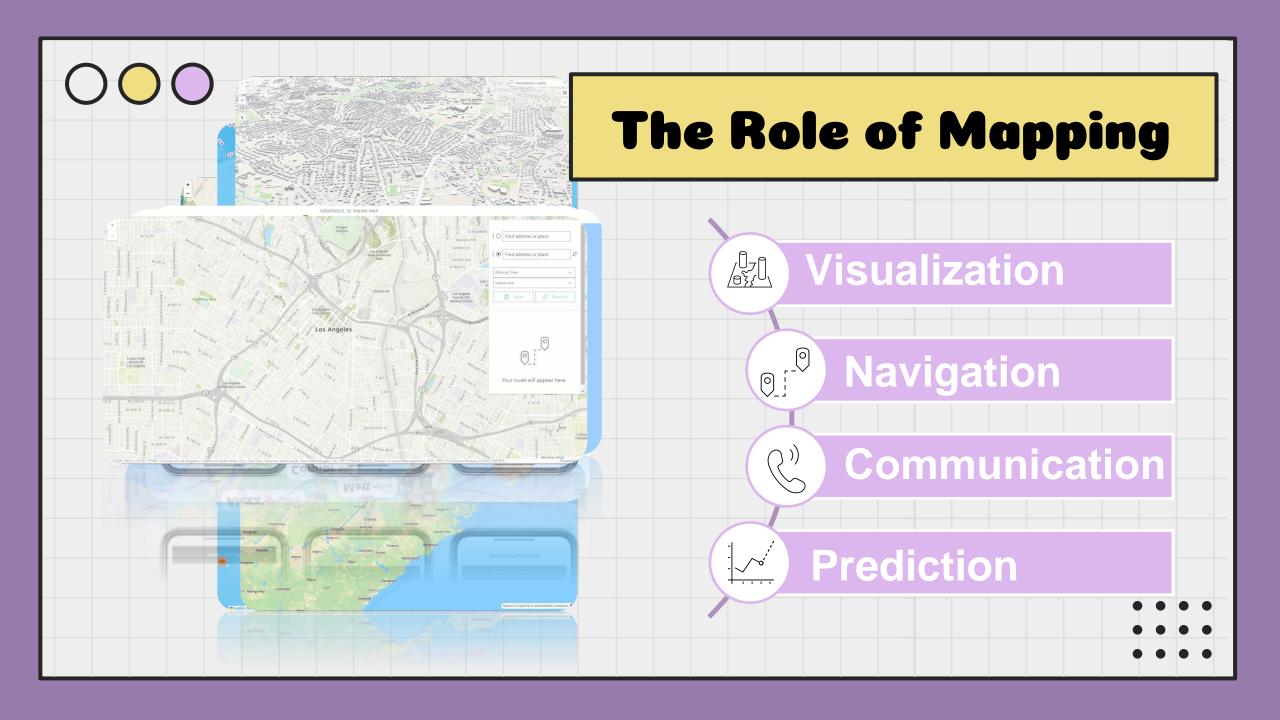

**ArcGIS/Esri Integrations** 

02

Web Mapping Libraries

04

Real-World Examples & Conclusions

# Key Mapping Concepts

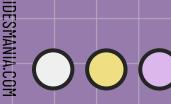

Basemaps

**Data layers** 

Geocoding

# Basemap Types

#### **Static Raster Tiles**

- Pre-made map images
- Fast & simple
- Fixed look

#### **Vector Tiles**

- Map data rendered onthe-fly
- Dynamic styling
- Always sharp

SLIDESMANIA.C

## Library Commonalities

#### Core Tech

- Built on JavaScript
- Compatible with HTML & CSS
- Works across modern browsers

#### Open Source

- Cost-Effectiveness
- Community-driven
- Modifiable
- Interoperable

#### Easy to Learn

- Simple APIs
- Extensive documentation
- Abundance of Resources

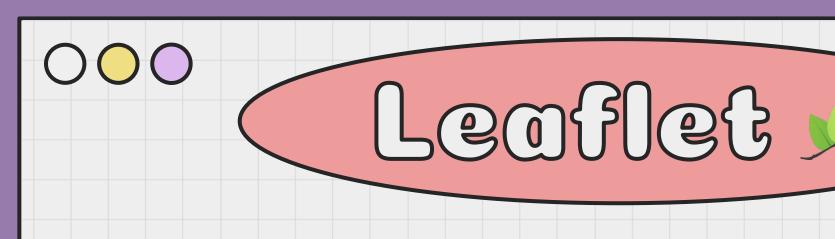

#### Key Features

- Interactive & mobile friendly
- Customizable
- Web Mercator projection

<u>leafletjs.com</u>

github.com/Leaflet

- Lightweight (~42 KB JS)
- Tons of plugins
- Focuses on simplicity and performance

# Leaflet: Simple Map Demo

SLIDESMANIA.COM

# Leaflet - Simple Map

```
const map = L.map('map').setView([lat, long], zoom)
L.tileLayer('tileURL/{z}/{x}/{y}.png').addTo(map)
```

Create map Initializes at div id map's Basemap center tile function

Latitude (y), Longitude (x) Tile position

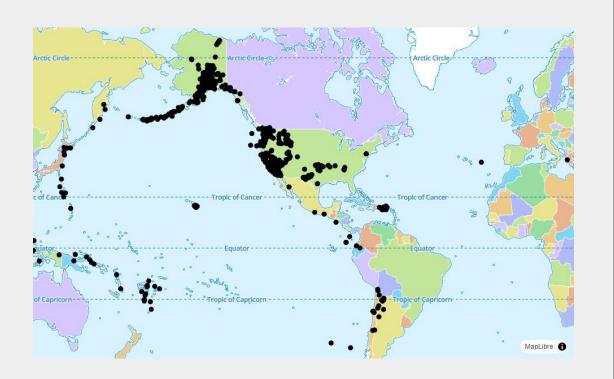

Zoom level (Oto ~19) Raster/Static Required images

# Feature Layers

- Geometry and attributes
- Interactive mapping

# Leaflet + Esri Leaflet Demo

## Leaflet + Esri Leaflet Geosearch geosearch required - providers arcgisOnlineProvider required - apikey optional - countries, categories, etc. featureLayerProvider required - url, searchFields **optional** – label, formatSuggestion, etc. optional - position, useMapBounds, etc.

### Leaflet + Esri Leaflet Cluster

```
L.esri.Cluster.featureLayer({
   url: 'featureLayerURL'
   showCoverageOnHover: false,
   disableClusteringAtZoom: 8,
```

**Disables showing** bounds of its markers

No clustering after this zoom level

maxClusterRadius: 10 }).addTo(map)

max radius cluster will cover from central marker

# Maplibre GL JS ?

maplibre.org github.com/maplibre/maplibre-gl-js

- Fork of Mapbox GL JS 1.x
- WebGL rendering
- Dynamic data integration
- Customizable styling options

# MapLibre GL JS: Simple Map Demo

## MapLibre GL JS – Simple Map

```
const map = new maplibregl.Map({
    container: 'map',
    style: 'tileURL/style.json',
    center: [long, lat], <
})</pre>
```

**Create map object contained in div id** 

Vector tile basemap layer style

Longitude (x), Latitude (y)

Zoom level (0 to ~22)

# Vector Tile Layers

- Pre-rendered
- Large datasets

# MapLibre GL JS + ArcGIS Demo

9

### MapLibre GL JS + ArcGIS

#### **ArcGIS basemap integration**

style: `https://basemapstyles-api.arcgis.com/...`

## WebGL and pagination for large datasets

```
arcgisRest.queryFeatures({
         resultOffset: 0,
         resultRecordCount: 2000,
})
```

#### **Dynamic queries**

executeQuery("STUTERATIO > 15")

#### **Visualized features**

map.on('click', 'school-points', showPopup);

#### **Vector Tile Layer**

```
map.addSource('layer-id', {
  type: 'vector',
  tiles: [
     'vectorTileURL/tile/{z}/{y}/{x}.pbf'
  ]
})
```

SLIDESMANIA.COM

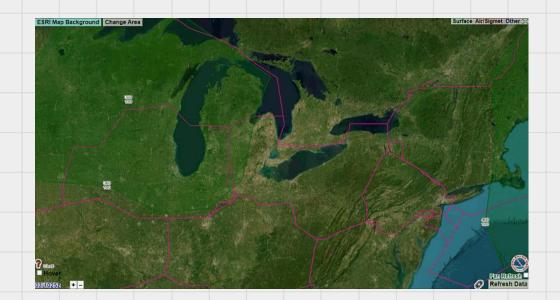

# OpenLayers 💙

- openlayers.org

https://github.com/openlayers

- Supports many map formats
- Advanced geospatial analysis
- Excels with multiple layers
- Multi-projection support

# OpenLayers: Simple Map Demo

### OpenLayers – Simple Map

```
Create map object
const map = new ol.Map({
                                                        targeted in div id
     target: 'map',
     layers:
                                                       Raster tile basemap
        new ol.layer.Tile({
                                                           layer style
           source: new ol.source.OSM()
                                                         Projection style
        })
                                                          Longitude (x),
                                                            Latitude (y)
     view: new ol.View({
        center: ol.proj.fromLonLat([long, lat]),
                                                       Zoom level (0 to ~28)
        zoom: 12 ←
```

LIDESMANIA.COI

# OpenLayers + ArcGIS Demo

## OpenLayers + ArcGIS

```
arcgisRest.queryDemographicData({
    studyAreas: [{geometry:{x:lonLat[0], y:lonLat[1]}}],
    authentication: arcgisRest.ApiKeyManager.fromKey(key),
    analysisVariables: [
       'PetsPetProducts.MP26001H B',
       'maritalstatustotals.MARRIED CY'
  }) then(res => {
 }) then (res = \frac{1}{2} fes.results[0].value.FeatureSet[0].features[0].attributes
    const data = res.results[0].value.FeatureSet[0].features[0].attributes
const message = Pop: ${data.TOTPOP}<br/>const message = Pets: ${data.TOTPOP}<br/>const message = Pets: ${data.TOTPOP}
    popup: show(event: coordinate, message)
```

# Real-World Applications

# Summary

#### Leaflet

#### Pros

- Lightweight, easy
- Many plugins

#### Cons

- Limited for large datasets
- Simple visualizations

#### Pros

- Large dataset handling
- vector basemaps

#### Cons

- Resource-intensive

#### OpenLayers

#### Pros

- Advanced projections
- Multiple layers and layer types

#### Cons

- Steep learning curve

# Thank you, RUAJSI
